

REMARKS/ARGUMENTS

Reconsideration and withdrawal of the rejections of the application are respectfully requested in view of the amendments and remarks herewith, which place the application into condition for allowance. The present amendment is being made to facilitate prosecution of the application.

I. STATUS OF THE CLAIMS AND FORMAL MATTERS

Claims 1-7, 15-45, 58-72, 74-75, and 77-78 are currently pending. Claims 1, 15, 22, 34, 58 and 70 are independent and are hereby amended. No new matter has been introduced. Support for this amendment is provided throughout the Specification as originally filed.

Changes to the claims are not made for the purpose of patentability within the meaning of 35 U.S.C. §101, §102, §103, or §112. Rather, these changes are made simply for clarification and to round out the scope of protection to which Applicants are entitled.

II. REJECTIONS UNDER 35 U.S.C. §103

Claims 1-7, 15-45, and 58-72 were rejected under 35 U.S.C. §103 as allegedly unpatentable over U.S. Patent No. 7,154,534 to Seki et al. (hereinafter, merely "Seki") in view of U.S. Patent Publication No. 2001/0040592 of Foreman et al. (hereinafter, merely "Foreman") and further in view of U.S. Patent No. 6,353,461 to Shore et al. (hereinafter, merely "Shore"); and

Claims 73-78 were rejected under 35 U.S.C. §103 as allegedly unpatentable over Seki, Forman, Shore, and further in view of U.S. Patent No. 6,546,187 to Miyazaki et al. (hereinafter, merely "Miyazaki").

Applicant respectfully traverses these rejections.

Independent claim 1 is representative and recites, *inter alia*:

"providing for recording video image data for each of a plurality of takes of a particular scene;

...

displaying for selection in the video display of an image data recorder a piece of the video image data corresponding to each of the plurality of takes of the particular scene;

...

selecting one of the displayed plurality of takes for the particular scene"

In the invention as claimed in claim 1, a video recording template provides for taking of video data. The template includes multiple scenes for the recording of image data.

The system allows for taking of multiple takes for each scene in the template. That is, images from multiple takes of a particular scene are recorded. The multiple takes are displayed for selection of one of the takes for the particular scene.

[0308] In other words, after a particular scene is selected in step F201, every time the scene shooting is performed in step F204, video image data is managed and recorded as video image data for the selected scene. When the shooting is done multiple times while the same scene is selected, pieces of video image data are managed as take 1, take 2, . . . of the same scene.

The invention as claimed in claim 1 provides a specific way in which a take is selected for a particular scene. A piece of the video image data from each take (e.g., a still image as

disclosed in Publ. App. par. [0143]) is displayed in the video display of the video recorder. A particular take is selected from the displayed takes for use in the particular scene.

FIG. 19 of the present application shows an example of the selection of a particular take.

FIG. 19

[0319] When a plurality of takes is produced for a particular scene, the take selection processing is performed to select which take to use. For example, for scene #4, take 1 and take 2 are produced. Referring to FIG. 19(a), the system controller 11 reads pieces of video image data of take 1 and take 2 (take 1 and take 2 of SC#4(R)) and displays the read video data on the LCD 29.

Thus, as claimed in claim 1, video data for a plurality of takes is produced for a particular scene. A piece of the video image data is displayed in the viewfinder or the display of the video recorder. The video shooter selects one of the takes from the displayed takes. Publ. App. pars. [0319]-[0320].

The Office Action at page 5, first full paragraph, points to Shore Fig. 3 and col. 1, lines 42-49 for the above-recited elements of claim 1. At the cited location (and elsewhere) Shore only describes providing a scene *number* and a take *number*. At other locations, Shore describes providing, in addition, a scene *name* or *comment*. Moreover, Shore describes a system that receives scene takes as video signals from multiple cameras that are recorded on video tape recorders. *Shore*, FIG. 2 and col. 5, line 47, to col. 6, line 8. A video assist control is used to select a particular one of the scene takes by identifying the take by a name, number, or similar identifier. *Shore*, col. 6, lines 42-63.

However, there is no description in Shore that scene takes are selected from video pieces reproduced on the display of one of the cameras that took the video image. Indeed, the video assist control of Shore is necessarily remote from the cameras and selection of a particular scene take is not from a video image from the scene take displayed on the display of the camera as recited in claim 1 of the present invention.

The above recited feature of claim 1 cannot be removed from the context of the claim. That is, claim 1 must be considered as a whole. Applicant is not attempting to claim ALL video capture devices that display images stored in the device for selection. The present invention as claimed in claim 1 is directed to using templates to aid in creating video content in a video capturing device. In this regard, as stated above, the feature of claim 1, “selection in the video display of an image data recorder a piece of the video image data corresponding to each of the

plurality of takes” is a part of the entirety of the invention that claims a unique combination to achieve the claimed result.

Neither Miyazaki, Seki, nor Foreman adds the element missing from Shore.

For reasons similar or somewhat similar to those described above with regard to independent claim 1, independent claims 15, 22, 34, 58 and 70 are also believed to be patentable.

III. DEPENDENT CLAIMS

The other claims are dependent from one of the claims discussed above and are therefore believed patentable for at least the same reasons. Because each dependent claim is also deemed to define an additional aspect of the invention, however, the individual reconsideration of the patentability of each on its own merits is respectfully requested.

CONCLUSION

Claims 1-7, 15-45, 58-72, 74-75, and 77-78 are in condition for allowance. In the event the Examiner disagrees with any of statements appearing above with respect to the disclosure in the cited reference, or references, it is respectfully requested that the Examiner specifically indicate those portions of the reference, or references, providing the basis for a contrary view.

Please charge any additional fees that may be needed, and credit any overpayment, to our Deposit Account No. 50-0320.

In view of the foregoing amendments and remarks, it is believed that all of the claims in this application are patentable and Applicants respectfully request early passage to issue of the present application.

Respectfully submitted,
